LIFE-SAVING FLOATING NECK BRACELET HELPER

A device that helps to safe at water accidents

Entering the water nobody plans to drown but there are different emergency situations which you can suddenly find yourself in. Among them are dangerous currents, cramps, dizziness, jellyfish bites, fatigue, heart attack, and many other unpredictable things. Strangely enough, many people sink even when there are people around. It happens fast and quietly. A sudden diaphragm spasm does not allow to scream for help. Often the only person who can help you is yourself. There is no time to wait, you must act! Just pull the hand grip down to activate the mechanism and to inflate airbag around your neck. Now, your head is over the water, you are safe!

We are absolutely confident in the quality and reliability of our product, and we offer you a unique water rescue tool Helper 100%! Helpers are convenient because they are compact and do not hamper your movements wherever you are and whatever you are doing: surfing, snorkeling, fishing, kayaking, having fun or simply swimming. If you need help just pull down a red hand grip and inflated airbag will keep you afloat and your head up on the water surface. Once your Helper device is inflated, you are safe.

HOW TO WEAR AND USE HELPER

Put your HELPER device on your neck, fasten the buckle and tighten the strap.

In case of emergency, pull down the red cord hand grip to activate the air bag.

The inflated air bag will hold your head up on the water surface. Keep calm and swim to safety. Use the whistle on the device to attract attention in order to receive help.
